

The visual and verbal system for Flying Fox Education.

A calmer, more considered look inside the wider Flying Fox family. This guide shows how it is built and how it is used.

Flying Fox Education is a distinct stream inside the wider Flying Fox family.

It shares the parent brand's typography and voice, and draws from the same colour vocabulary. What changes is the emphasis: blue leads, one accent colour appears per section, text sits inside thin rounded boxes, and the wordmark is text-only, without the flying fox symbols.

What this guide covers

Colour, typography, logo use, the thin-box treatment, squiggle motifs, layout, and voice for every asset that carries the Flying Fox Education mark. It applies to proposals, workshop resources, teacher-facing collateral, social media, presentations, the website, and any co-branded partnership material.

Who this guide is for

Flying Fox staff and buddies producing Education-branded materials, external designers and agencies working with Flying Fox Education, and school or university partners preparing co-branded assets. A human reviewer signs off every external deliverable before it ships.

THE CORE IDEA

Every Flying Fox Education asset should feel calm, considered, and unmistakably part of the Flying Fox family. The look is quieter than the parent brand: more restraint, more whitespace, one accent colour at a time, and text held gently inside thin rounded boxes so ideas breathe on the page.

Six things that make Flying Fox Education look like Flying Fox Education.

Blue leads

Pastel Blue is the primary colour. It carries covers, hero sections, and the majority of collateral. Green and Orange rotate in for variety.

One colour per section

Any given section uses one accent colour, plus neutrals and imagery. No mixed-accent sections.

Text lives in thin boxes

Body copy sits inside a rounded rectangle with a thin border, giving each idea its own quiet container.

Squiggles bring warmth

Organic curved shapes sit behind or beside content as decorative motif. Same colour family as the section, low contrast.

Wordmark, not symbol

The Education logo is a two-weight wordmark, offered in horizontal and stacked lockups. It does not carry the flying fox symbols from the parent brand.

Same voice, sharper focus

The same four Flying Fox voice pillars, tuned for schools, principals, curriculum coordinators, and student wellbeing leads.

One primary colour, two supporting colours, and neutrals.

Pastel Blue is the primary Flying Fox Education colour and appears on more sections than any other. Yellow Green and Orange rotate in as supporting accents to give a suite of documents rhythm and variety.

CMYK 0 · 0 · 4 · 0

How to use them

- Pick one accent colour per section. Never combine two on the same page.
- Blue is the default and should outweigh Green and Orange across a full suite.
- Use Green to shift pace, or for supporting information such as pricing or FAQs.
- Use Orange sparingly for calls to action, alerts, and moments that need punch.
- Body copy is Ink on white or cream backgrounds, and white on any accent-colour background.

Cadence

A typical rhythm across a document might run Blue then Green then Blue then Orange then Blue. Blue always outweighs the others. If a suite has more Green or Orange sections than Blue, it has drifted away from Flying Fox Education.

Each section uses one accent colour. Never two.

A section is either a Blue section, a Green section, or an Orange section, plus neutrals and imagery. Text, borders, and squiggles all draw from the one chosen accent. This restraint is what gives Flying Fox Education its calm, considered feel.

USE

SUPPORTINGSPARINGLY

Two typefaces do all the work.

Now Bold for display, Poppins for everything else. This is the same pairing as the parent Flying Fox brand.

DISPLAY

Now Bold

Used for headings, wordmarks, and hero moments. Tight tracking, generous size. Falls back to Nunito, then Poppins, when Now is not available.

BODY

Poppins

Used for body copy, UI, captions, and labels. Weights 400 and 600 only. Body copy runs at 15 to 17px, line height around 1.6, no tracking.

EYEBROW · LABEL · TAG

A two-weight wordmark, available in two lockups.

FLYING FOX in bold, EDUCATION in regular. Choose the horizontal lockup by default, and the stacked lockup when the space is narrower than it is tall.

Unlike the parent Flying Fox mark, the Education wordmark carries no symbols, only type.

FLYING FOX EDUCATION

HORIZONTAL · PRIMARY

Default for hero moments, page headers, letterheads, wide covers, and email signatures.

FLYING FOX
EDUCATION

STACKED · ALTERNATE

Use in narrow columns, square social tiles, avatar-style contexts, and any composition taller than it is wide.

Structure

In both lockups FLYING FOX sits above or to the left of EDUCATION with fixed spacing. Never rearrange, combine, or break the alignment of the two words.

Weight contrast

FLYING FOX is Now Bold. EDUCATION is Now Regular. This weight contrast is the signature of the mark and must never be flattened.

Clear space

Give the mark breathing room equal to the cap-height of the letter F on all sides. Nothing else, no text, image edge, or graphic, should sit inside that clear space.

Do

- Use one solid brand colour across the whole wordmark.
- Pick the lockup that fits the container: horizontal for wide, stacked for narrow.
- Keep either lockup at its original proportions.
- Give the mark clear space equal to the cap-height of the F.
- Prefer Pastel Blue on white or cream backgrounds; white on solid brand colours.

Don't

- Do not colour FLYING FOX and EDUCATION differently.
- Do not flatten the two-weight contrast into a single weight.
- Do not invent a new lockup or rearrange the two words.
- Do not add symbols, taglines, or effects to either lockup.
- Do not place the mark on low-contrast or busy backgrounds.

Minimum size

Horizontal: 30mm wide in print, 160px wide on screen. Stacked: 24mm wide in print, 120px wide on screen. Below these sizes the two-weight contrast between FLYING FOX and EDUCATION starts to disappear and the mark loses its identity.

Render the logo in a single, high-contrast colour that reads cleanly on its background.

FLYING FOX EDUCATION

ON GREEN

Logo in white

FLYING FOX EDUCATION

ON ORANGE

Logo in white

FLYING FOX EDUCATION

ON INK

Text lives inside a rounded rectangle with a thin border.

This is the most distinctive habit in the Education system. It slows the eye, gives each idea its own container, and makes even a simple page feel intentional.

ON WHITE

Border in the section accent. Text in Ink. Radius is generous, around 20 to 32px, to keep the shape soft.

ON WHITE · ORANGE

Same treatment, different accent. Only one accent lives on any given section.

ON BLUE

Border becomes soft white at 85% opacity. Text becomes white. Body copy stays in Poppins.

ON GREEN

Same treatment on Green. The box holds the content and gives the section a calm rhythm.

Rules

- Border weight: 1.5px, never heavier.
- Radius: 20 to 32px, depending on box size.
- Padding: 22 to 34px, keep copy well off the edge.
- One accent colour per box, matching the section.
- Outline only. Do not fill the box with an accent colour.
- Never nest a box inside another box.
- Stack boxes with 22 to 26px of vertical space between them.

Organic curved shapes are the connective tissue of Flying Fox Education.

Squiggles echo movement, curiosity, and the shape of a conversation. Use them as decorative background motif, never as content-bearing shapes.

Four approved squiggle variants. Rotate through them to keep sections fresh.

Placement

- Anchor to a section edge and let them run off the artboard.
- Use them behind content, never on top of body copy.
- Size generously; a squiggle should read as background, not decoration.

Colour

- Match the section accent, at 20 to 30% opacity when overlapping other content.
- Full opacity is fine when the squiggle sits in negative space.
- Never colour a squiggle in an accent that is not on this section.

Don't

- Do not distort, mirror, or heavily crop the squiggle beyond its shape.
- Do not use a squiggle as a container for text or an icon.
- Do not multi-colour a single squiggle.

Generous margins. Consistent boxes. Room to breathe.

Margins

- Web: content width capped around 1200px, side gutters at least 24 to 80px depending on viewport.
- Print: A4 landscape, 22 to 24mm outer margin, portrait A4 for long documents at 20mm.
- Never fill an edge with copy. Squiggles may bleed off; text does not.

Spacing scale

TOKEN	VALUE	TYPICAL USE
xs	8px	Icon-to-label gaps, tag padding
sm	16px	Small gaps, inline dividers
md	24px	Box internal padding, section breathing room
lg	48px	Between sections on print
xl	80 to 140px	Web section padding, hero padding

Grid

Use a 12-column grid at 20px gutter on landscape documents, or two-column and three-column layouts as shown throughout this guide. Content aligns to the grid; squiggles do not.

Border radius

Thin boxes: 18 to 36px. Small tags and buttons: pill shapes. Photography and image blocks: 20 to 24px. Sharp rectangles are avoided on feature elements.

Same four Flying Fox voice pillars. Tuned for schools.

Flying Fox Education writes for principals, heads of student wellbeing, curriculum leads, and the parents and students they serve. Precision and warmth need to sit side by side.

COMMUNITY-MINDED & INCLUSIVE

Every student belongs. Speak in ways that make school staff feel they are joining a movement, not buying a service. Reference the community that a school will be joining.

HIGH ACHIEVER & CONFIDENT

Reference curriculum, evidence, and outcomes with authority. Schools are professional environments and Flying Fox Education is a professional partner.

HONEST & TRANSPARENT

Pricing, scope, and program limits are plain. If something is uncertain, say so. Build trust with straight talk rather than salesmanship.

FUN & RELATABLE

Even in formal collateral, allow warmth and playfulness through. Students respond to it and staff notice it too.

Language rules

- Australian English throughout. No em-dashes.
- Say *participants*, not clients or service users.
- In formal school contexts, use *volunteers*. In warm community moments, *buddies* is fine.
- Person-first by default. Identity-first where a community prefers it, such as Autistic or Deaf students.
- Never patronise students with disability. Never use inspiration-porn framings.
- Never speak for a young person; quote them, invite them, or let their work speak.
- Reference the Victorian Personal and Social Capabilities Curriculum accurately.
- Flag anything requiring legal, clinical, or NDIS-specific interpretation for qualified review.

How the pieces come together on real assets.
